

ALTERA®

Louvered canopy

Your Altera® dealer:

ALTERA[®]

Louvered canopy

The Altera, “the ultimate flexible outdoor space”. A hybrid between a sunblind and (free-standing) terrace roof that largely consists of aluminum profiles. This makes the Altera not only sun-protecting, but also water-resistant and extremely durable.

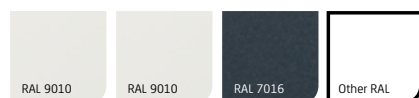

An Altera creates a shady terrace in almost every conceivable situation. In the middle of the garden, on a roof terrace, or directly on the facade, it’s all possible. The slatted roof can be placed both free-standing and wall-mounted. If the maximum size of 4 x 4 meters is not enough, it is possible to link the Altera in both width and depth. The 125-degree rotating slats can be mounted both in width and depth and can be maneuvered in any intermediate position. All this for optimal sun regulation for your situation. Available in RAL 9010, RAL 7016 or a combination of both. Expandable with atmospheric LED lighting and vertical sun protection to keep out the low sun. Ask your dealer for all possibilities.

Characteristics

- Hybrid sun protection
- Very robust and durable
- 125° Rotating slats
- In addition to sun protection, also water-resistant
- Expandable with LED lighting
- Expandable with vertical sun protection (SolidScreen)

Colours

Pure white (gloss)*

Pure white (mat)**

Anthrax grey textured

On request

*Frame

**Only slats

Maximum dimensions

	Width	Depth	Height***
Max. per Altera (coupling possible)	4000 mm	3979 mm	2800 mm

***Please note, this concerns the passage height. With a passage height of 2800 mm, the total height of the Altera louvered canopy (including open slats) is 3015 mm.
